

The new rules of technology

Sriram Narayan
ThoughtWorks

Rule# 1

Open source application
software is eroding vendor
influence

Rule# 2

Geeks with popular blogs are
able to influence technology
adoption

Rule# 3

No one uses a commercial Java
application server anymore

Rule# 4

The web has won

Rule# 5

Open web standards are mature
enough for the web to be used
as integration layer

Rule# 6

Big iron SOA is nearly dead.
Evolutionary bottom up SOA
holds promise

Rule# 7

The end to end principle is showing its effects on the architecture of systems as well as organisations

Rule# 8

You can't thrive in your tech career if you know just one language/platform

Rule# 9

DevOps is gaining ground.
Teams with embedded
sysadmins who can code will kill
the last mile.

Rule# 10

You aren't a good web
developer if all you know is
some server side web
framework

Rule# 11

Certifications are passé
